Luxology offers a Spotlight about modo 401

A Complete Video Overview of modo 401

October 22, 2009 - 13:06

The modo Spotlight series is designed to provide an overview of modo 401 and show how its toolset can be applied to a real world project, with a special emphasis on the new features included in modo 401.

There are three videos from Andy Brown included in the modo 401 Spotlight series. Together they provide an insight into the language of modo, in order to provide you with enough information and confidence to be able to subsequently explore what can be done with modo in your own field of work. Focusing on the creation of a bee, we examine the mechanics and philosophies which underpin the software, from modeling, rigging and animation, to texturing and rendering. These videos are ideal for anyone who wants to evaluate what it is like to use modo in a content creation project or to any person who seeks a deeper understanding of some of the tools and workflows introduced in modo 401.
