

Animal Logic Overview and Show Reels

Animal Logic is an Australian digital visual effects company based at Fox Studios in Sydney, Australia and Santa Monica, California

July 02, 2009 - 20:37

Established in 1991, Animal Logic's core business has traditionally been the design and production of high-end visual effects for commercials and television programs, although Animal Logic has also worked on various design projects for clients such as Cartoon Network and Spicks and Specks.

In recent years, however, the company has produced visual effects for many large budget film projects, including The Lord of the Rings: The Fellowship of the Ring, Moulin Rouge!, The Matrix, Babe: Pig in the City, Hero, House of Flying Daggers, Harry Potter and the Goblet of Fire, World Trade Center, Fool's Gold, 300, Knowing, and Australia.

In 2002, Animal Logic began work on its first computer-animated feature film, the Academy Award-winning Happy Feet, for director George Miller. Released in the United States on November 17, 2006, the project has seen the company expand significantly, recruiting up to 300 artists and technicians from Australia and around the world.

Their video clip of the 2006 Telemetry Orchestra single "Under the Cherry Tree" won an award in early 2007 in New York.
