Asus G73 Notebook with ATI Mobility Radeon HD 5870

This laptop includes the most powerful mobile graphic card in the market today

March 24, 2010 - 13:48

The new Asus Republic of Gamers (ROG) G73Jh is like no other gaming notebook. Eschewing the flash and gimmicks typical of gaming notebooks, the G73Jh instead boasts an understated, subtly aggressive design inspired by a stealth fighter. At its heart lies the most powerful components available today, including the latest Intel® Core™ i7 processor, DirectX 11-capable ATI® Radeon™ HD5870 graphics, and up to 8GB of DDR3 system memory.

Strike in Silence: Designed for Serious Gamers

The G73Jh sports a striking angular design inspired by the iconic F-117 Nighthawk. Far from being merely cosmetic, every facet of the G73Jh's design reflects a conscious effort to improve the user experience. For example, the placement of all the heat and noise-generating components at the rear of the notebook and the implementation of a unique twin rear venting system keep the heat and noise as far away from the user as possible. The innovative placement of components also allows the palm rest to be exceptionally thin, just like a desktop keyboard. Furthermore, the keyboard plane is inclined 5 degrees, improving ergonomics and thus ensuring optimal comfort while gaming and typing.div.overlay { width:1040px; height:480px; } #imgplay { margin:39px 0px 0px 190px; } #player { background:no-repeat url('/videos/news/2010/march/asuslaptop.jpg') top center; } #splash, #player, #player embed, #player object { width:560px; height:243px; }

Dominate: Engineered for Extreme Performance

The G73Jh offers an aggressive specification that will exceed the needs of gamers for a long time to come. The top-of-the-line model sports an Intel i7 Intel Core™ i7-820QM processor, 8GB DDR3 SDRAM, an ATI® Mobility Radeon® HD 5870 with 1GB GDDR5 VRAM, and 1TB of storage space for incredible gaming and multitasking performance. The G73Jh also features one-click, on-the-fly overclocking capabilities perfect for gamers looking to push the hardware to the very limit.

Believe: Purpose-built for Unprecedented Immersion

With its DirectX 11-capable graphics and simulated 7.1-channel HD audio with EAX 4.0 compatibility, the G73Jh delivers next-generation gaming on a mobile platform. Gamers will be able to crank up the settings in the latest games and still achieve blistering frame rates, as well as experience ultra-realistic in-game sound effects and perfect positional audio.
